REMEX GmbH is a specialist for the professional management of mineral waste from construction, industrial production and municipal solid waste incineration. Based in Düsseldorf, Germany, REMEX operates more than 30 subsidiaries and associated companies across Europe and Asia. With extensive knowledge of cross-border business activities, the company provides a complete scope of services from logistics and processing in its own recycling facilities to subsequent recovery or disposal, covering all areas of mineral waste management.

Focusing on the essential

Our core competencies include mineral waste management and the production of secondary construction materials as well as the recycling of metals recovered during mineral processing. These business activities are complemented by services in the areas of land reclamation and soil treatment, underground stowage, covering of tailing piles and landfill management.

Success at home and abroad

Since beginning its business, REMEX GmbH has enjoyed steady growth. As part of this development, the company has opened up new business areas and expanded its geographical presence. REMEX is now an internationally recognised brand for sustainable resource management across Europe and Asia.

international.remex.de

Details of our cross-border business activities can be found on our international website.

Activities at a glance

REMEX waste management operations are structured into distinct areas and offer all possibilities for the optimum processing and recovery of raw materials contained in mineral waste. We provide a complete scope of waste management services for both hazardous and non-hazardous waste.

Achieving targets sustainably

REMEX is committed to three core sustainability challenges: climate protection, landscape conservation, and landfill capacity relief. Our contribution to environmental protection can be clearly measured through the production of secondary aggregates, recovery of metals, the remediation of land, and the treatment of contaminated soil.

Climate protection

During the processing of mineral waste, REMEX recovers valuable metals. These serve as secondary raw materials for the metal processing industry, which reduces the emission of climate-damaging gases.

690,000 t/a CO₂-eq.

Landscape conservation

The demand for gravel and sand worldwide is increasing continuously. Quarries and gravel pits take up valuable land. The use of substitute construction materials reduces the need to extract natural resources.

2,900,000 m³/a

Landfill relief

Through our recycling activities, we avoid waste disposal and in doing so make a relevant contribution to reducing the need for landfill.

5,800,000 t/a

sustainability.remex.de

On the REMEX sustainability website, we document our contribution to environmental protection with concrete figures, explanatory notes and the corresponding data sources.

Key figures at a glance

Successful results are reflected in strong figures, and sustainable corporate development is represented in steady, moderate growth. REMEX delivers on both – securing the basis for long-term corporate success.
